## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4, 6-7, 14 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Kubota et al (4893502). Kubota et al discloses the same invention as claimed: a rotation angle detection device characterized by comprising: a yoke member 23 which is formed of a magnetic material rotating in synchronization with a rotary shaft 3 and fixed to a nonmagnetic member 20 (Fe or Al) attached to the rotary shaft; a magnet 22 which is disposed with a predetermined space apart from the yoke member (22 bonded to 23, thus spaced apart from a bonding layer) in the axial direction and has a magnetic pole facing the yoke member on the axial direction edge surface thereof; and a magnetic detection element 24 disposed in a magnetic path which is formed by the magnet and passes through the yoke member. See Fig. 13. Although specific columns, figures, reference numerals, lines of the reference(s), etc. have been referred to, Applicant should consider the entire applied prior art reference(s).

### ***Allowable Subject Matter***

Claims 2-3, 5, 8-13 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2862
